

Semestral assignment

for Open Source Programming course

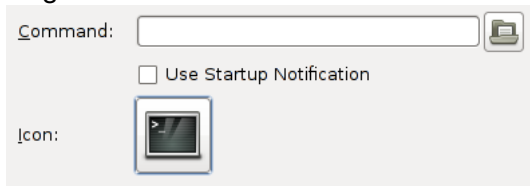

Ondřej Kulatý

Czech Technical University in Prague
Faculty of electrical engineering

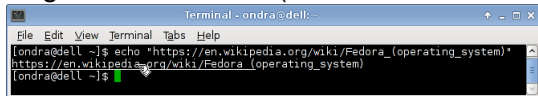

9.5.2013

My task was to fix some minor bugs in Xfce project, mainly:

- Bug 8139 - Can't remove icon from custom action

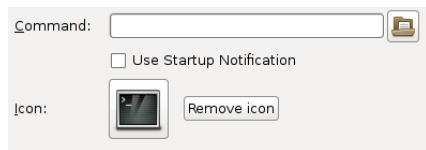

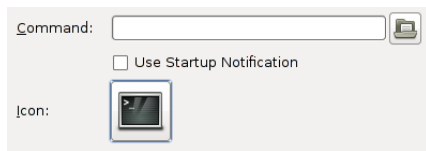

- Bug 9800 - url's with (in them aren't selected right

Bug 8139 - Can't remove icon from custom action

- Was fixed? **YES :-)**
- A GTK button for icon removal was added next to the icon.
- Approx. time spent: 3 hours
- Patch was sent to mailing list and bugzilla, but no feedback from developers so far.

Bug 9800 - url's with (in them aren't selected right

- Was fixed? **NO** :-)
- Caused by regexp, which matches some url wrong.
- I have managed to tune the regexp to match url mentioned in bug description, but then some other urls were not matched right.
- Time spent: gave up after 4 hours

PROS:

- How to contribute wiki page
- Quick replies to my first mail about my decision to contribute Xfce
- People try to help on IRC (but usually there are only few people present)

CONS:

- Asked about 2 problems on mailing list -> no response
- Thunar UCA plugin is now part of Thunar, but old repo still exists (confusing)
- No response on my patch so far. (Asked on mailing list, bugzilla, IRC, direct mail to bug assignee)
- Only very brief developer docs and only on some topics.

Thank you for your attention.
