

# ADIUM

**Xtras:** transferring files through Dropbox

[murinjan@fel.cvut.cz](mailto:murinjan@fel.cvut.cz)

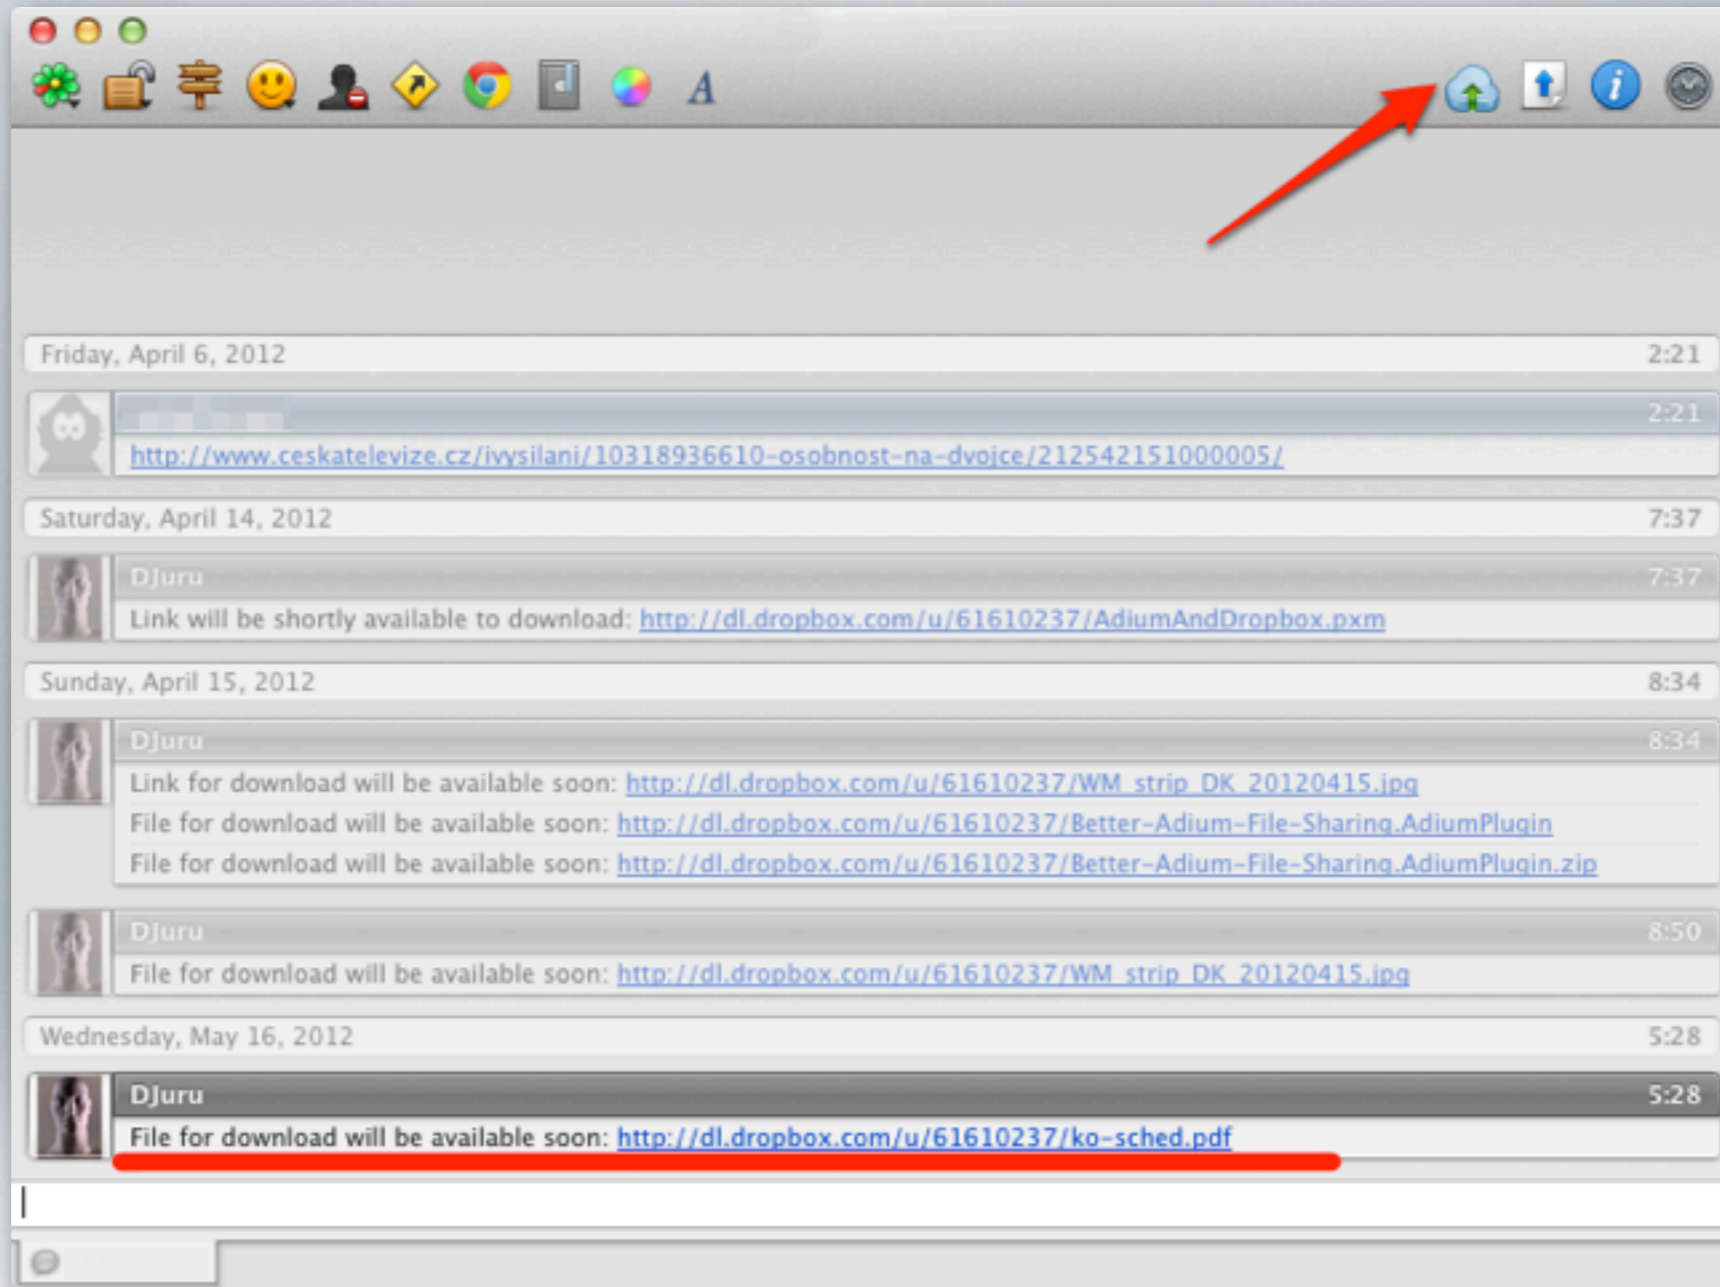

# XTRAS

- File transfer through P2P is quite unreliable.  
⇒ let's make use of Dropbox's feature.
- User wants to send a file or files:
  1. Copy file into Public folder.
  2. Generate Public link.
  3. Send a message with link instead of the file.

# MY WORK

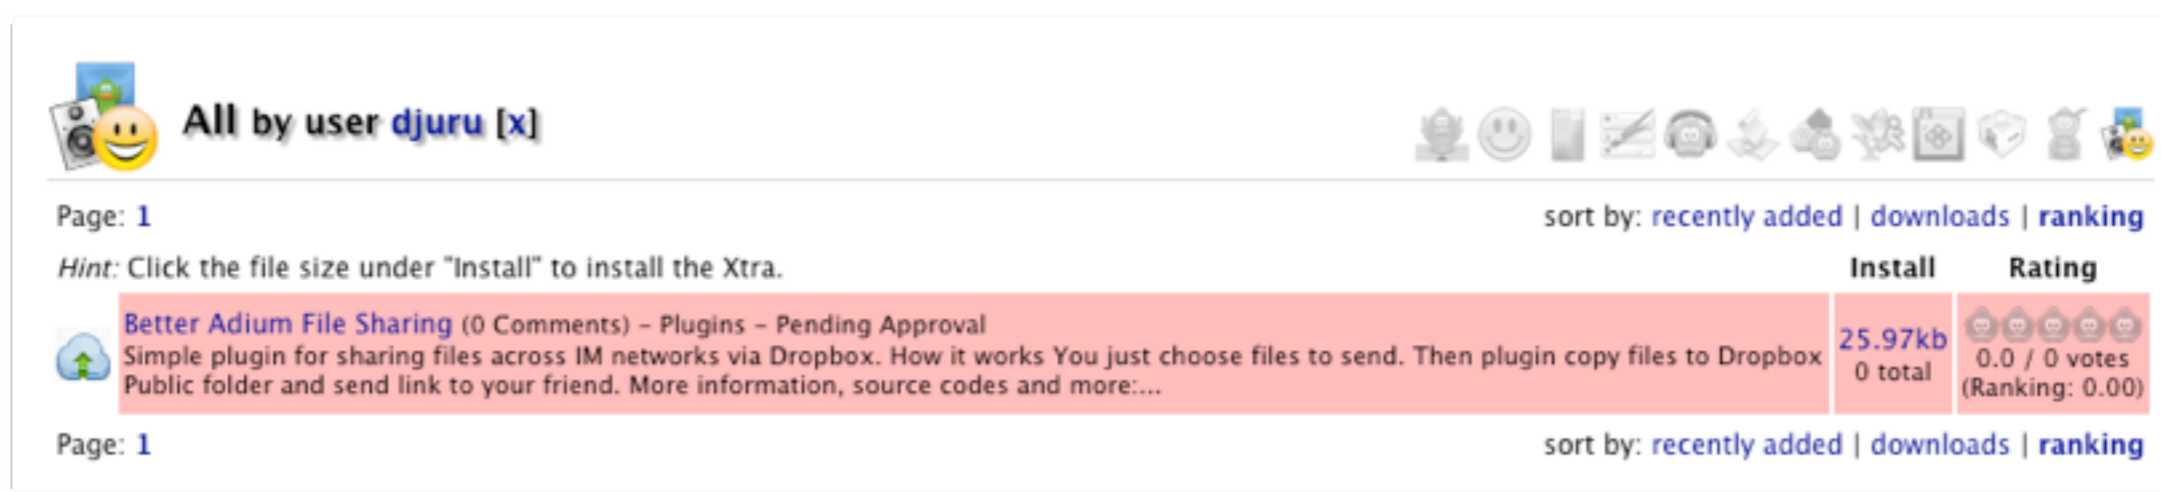

- User choose files > Unify names > Copy to Public folder > Generate links > Send messages
- Objective-C, Cocoa, Adium API

SCREENSHOT

# COLLABORATION WITH COMMUNITY

- Waiting for approval (one moth so far).

The screenshot shows a forum post by user 'djuru'. The post title is 'Better Adium File Sharing (0 Comments) - Plugins - Pending Approval'. The description reads: 'Simple plugin for sharing files across IM networks via Dropbox. How it works You just choose files to send. Then plugin copy files to Dropbox Public folder and send link to your friend. More information, source codes and more:...'.
