

VLC Player

Added support for working with playlists
with telnet

Assignment

- Support for move and delete commands for telnet
- VLC media player
- Not only telnet, but other text consoles

Summary

- New scripting language Lua
- Adding support for lua functions in C for move
- Find bug in delete function and fixed it
- Write new lua script commands and string parsing
- Result: in every text form of control functioning move and delete functions without program crash(unlike some other functions in this control)

Result

- At first not approved, because formal errors and only one patch
- Split into two patches and accepted
- It will be in next release 2.1
- Was asked by one user/developer to do support for it in http, which also use Lua script language

Community

- Learned that most people are helpful on IRC (used in other projects, like Drupal and Qt for questions)
- VLC main developers are very pedantic
- VLC as older project maybe need rework in C++, readability is getting out of hand in my opinion
