My contribution

- ▶ Fix issue with exchange rate in transfer transaction.
- ▶ If accounts is filled with autocomplete then exchange rate will not load properly(1 instead of actual value).

The screenshot shows a mobile banking app interface for a transfer transaction. At the top, the amount is 10.00 €. Below this, a red error message states "Exchange rate was not loaded properly" with a small red box containing the number "1". The transaction is dated 28 February at 20:18. The recipient account is "Fio CZK", which is marked as "Autocompleted" in red. The sender account is "Fio EUR". The transaction is confirmed, as indicated by a green checkmark and the word "Confirmed". At the bottom, there are "Cancel" and "Save" buttons.
