Path: favorites: Add to Favorites
Filter: *[^~#] Edit Favorites

favorites:

- %PROGRAMFILES%\apache\apache-tomcat-6.0.32
- %USERPROFILE%\Downloads
- C:\documents\work
- %WINDIR%
- %WINDIR%\System32
- D:\projects
- D:\projects\TVS\semestralka

Name	
+	%PROGRAMFILES%\Apache\apache-tomcat-6.0... Dir
+	%USERPROFILE%\Downloads Dir
+	C:\documents\work Dir
+	%WINDIR% Dir
+	%WINDIR%\System32 Dir
+	D:\projects Dir
+	D:\projects\TVS\semestralka Dir

Accomplishments

- I was able to build the binary
- I was able to use NetBeans for development
- I got somewhat familiar with GUI and favorites related code
- I was able to make some changes towards my goal

Failures

- I wasn't able to implement drag'n'drop reordering the way I desired
 - I managed to override default ordering
 - I managed to implement some drag'n'drop functionality but it didn't work very well
 - My code was ugly

Experience gained

- I learnt that it's really hard to just sit to a big project like jEdit and start making changes
- Documentation of open-source projects can be tricky – some parts are very well documented but other parts aren't

Thank you for attention
