

# Very Fast Web Development

---

Eliška Roubalová

# About Hoodie

- free Open Source software for building web and iOS apps
- goal is to be **accessible for designers** and people with few coding skills
- **noBackend technology** – front-end friendly API in Dreamcode
- **offline first** – apps are independent on Internet connection
- plugins (written in Node.js)

# My contribution

- component: **hoodie-server-account**
- account REST API backed by CouchDB
- current version is not completely compatible with CouchDB API specification
- some **database errors** are not correctly handled – general errors thrown instead – lost information
- **Fix 409 Conflict error while signing up to be correctly caught**

## Result

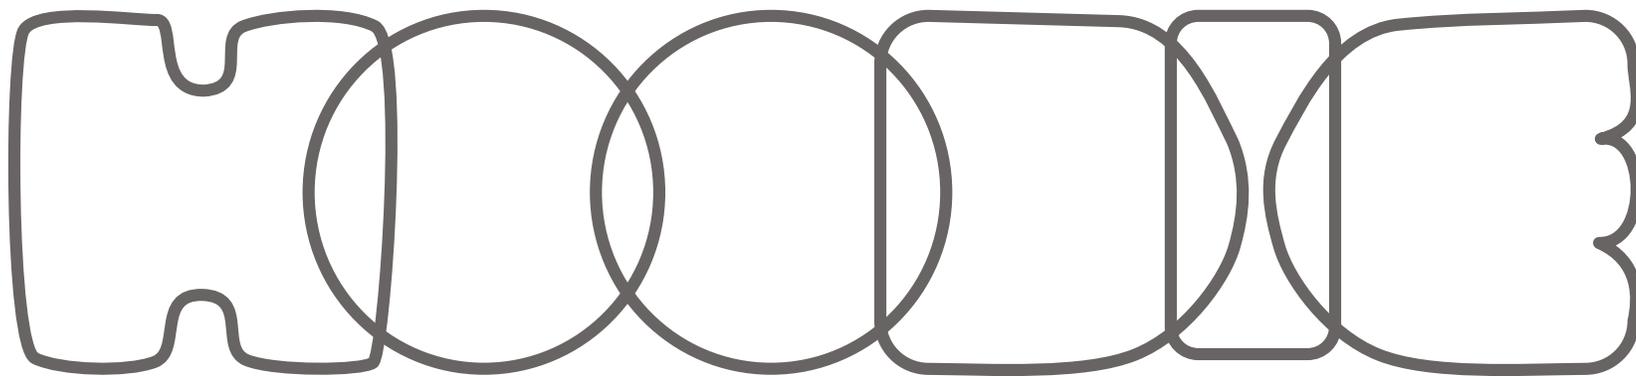

- issue fixed
- tests created
- contribution accepted
- fix released in minor update

## Experience

- quick responses
- helpful people
- welcoming community
- I joined the project

Thank you for  
attention.
