Sharepoint 2007 featurest

- This is a project for SharePoint 2007 Features. Features add new functionality to a SharePoint 2007 farm, site collection, or site. This project will create Features to address deficiencies in SharePoint 2007 or add new capabilities. You should understand a little about Features before trying these out. The packages here use batch files or WSP files to install the Features. After installation, be sure to activate the Features to see them in SharePoint.

My Work

- **Log Viewer Feature gets an error with empty log files.**

- **Description**

  The Log viewer feture get an "Object reference not set to an instance of an object." trying to open an empty log file.

Problems and risks

- No repository
- Long time without updates (2008)
- Non standard „Linux" opensource
