chasaota@fel.cvut.cz

To remind

- Impress remote – presentation remote control over Android device

- Part of LibreOffice

- Java, framework Android

- Time countdows was broken

- Requirements: combobox with predefined times, persistent user choice, edit custom time

Result

- Android native GUI elements used

- EditText with Autocomplete

- SharedPreferences for persistent user choice

- Scope: small, thanks to elements from Android library – change of UI in xml configuration file, listener, small changes of other code

Evaluation

- Change committed, tested, adopted to master

Community cooperation

- Git repository, Bugzilla

- Diff sent via email

- Impress remote is small project, can be built quick and deployed to Android device

- Ideas: use of objects instead of many if else if with flags, using Android elements, more comments
