FRAMEWORK

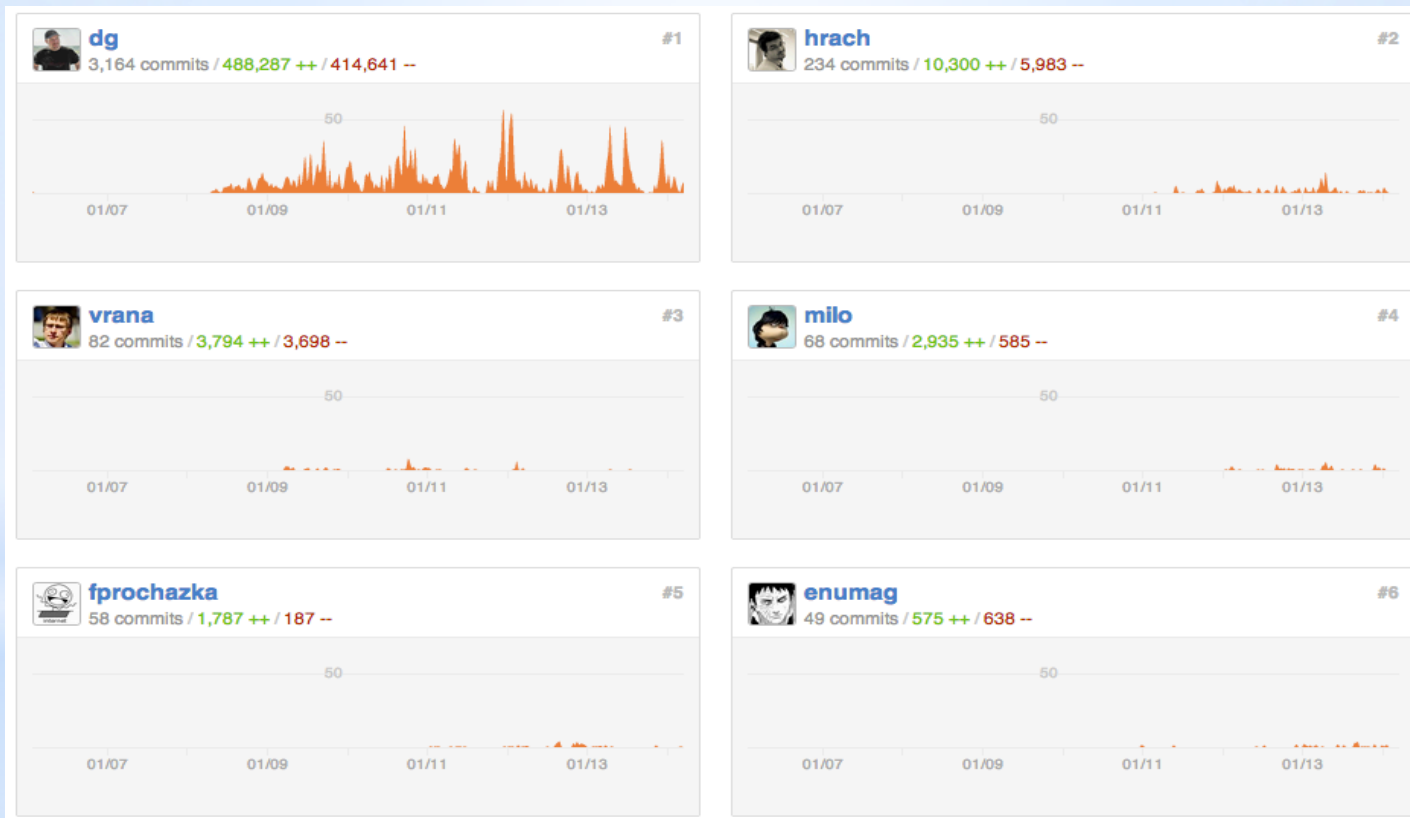

OSP 2014, Martin Adámek

About Nette FW

- * Czech framework for Web Applications
- * Written in PHP 5.3+
- * First public release in 2008 - v0.7
- * Current stable version 2.1.1
- * Github SCM, issue tracking
- * Consists of a few base components
 - * Routing, Forms, Templating System, ...

Development

* 4395 commits, 104 contributors, but...

Development

- * 4395 commits, 104 contributors, but...
- * only a few with commit permissions
- * Pull Requests with code review
 - * Accepted Pull Request is merged into master branch

My work

- * Fixing issue with templating system Latte

- * Macro n:ifcontent

 - * Conditional rendering of HTML container based on its content

```
1 <form n:name="formName">
2     <input n:name="inputName">
3     <div class="error" n:ifcontent>{$form[inputName]->error}</div>
4 </form>
5
```

- * Issue with whitespaces:

 - * tabs, spaces and new line should be ignored

```
1 <form n:name="formName">
2     <input n:name="inputName">
3     <div class="error" n:ifcontent>
4         {$form[inputName]->error}
5     </div>
6 </form>
```

**Thank you for your
attention**
