

# Guava - Event bus

## Result presentation

Roman Smetana

# Task specification

Add callback methods to EventBus

- Improve logging/debugging capabilities
- Reduce code duplication

# Example of usage

```
EventBus eventBus = new EventBus() {  
    @Override  
    protected void onEventPosted(Object event) {  
        // do some logging  
    }  
};
```

# Added callbacks

- onRegister
- onUnregister
- onEventPosted
- onNoSubscriberRegistered

# Results

- Pull request submitted on March 17
- Have not been approved/rejected yet
- Automatic tests broken till middle of April

# Community

- Fast responses on the forum
- No pull request accepted since February

Thank you!
