(In reply to Federico Paolinelli from comment #1)

> Isn't it fixed by this

> `https://hg.mozilla.org/mozilla-central/rev/1ab5f84fa165#l13.13`?

Not necessarily, if `onClicked` is defined, but not a function. I actually saw this while a patch applied.

> The problem was that the button object passed to the notification api does not have a `onClicked` callback anymore since click events are handled by those handled objects.

Could you point me to the code which does this? I'm confused about which ends up with an onClicked property in the first place, since I don't see us setting that anywhere in the tree.

Margaret Leibovic - 2014-12-16 17:01:30 PST

Ah, I did some digging, and it looks like this is a regression from `bug-1084495`.

Comment 4 [reply] [-]

We probably just need a check for this method (in order to maintain backwards compat in this API. We should put some error logging in here to notify people of the deprecated API as well (and then we can deprecate it).

> Hi, can I take this as my first bug fix?

Sure, go for it! If you don't have a build set up yet, you should follow instructions here: `https://developer.mozilla.org/en-US/docs/Mozilla/Developer_guide/Build_Instructions/Simple_Firefox_for_Android_build`

Next, you should try to reproduce this error locally to understand what's going on

After that, you should write a patch with the fix suggested above, and attach it to this bug for review: `https://developer.mozilla.org/en-US/docs/Mercurial/Using_Mercurial#How_can_I_generate_a_patch_for_somebody_else_to_check-in_for_me.3F`

OK I'm in. I'm setting it all up, I'll let know my progress. thx

Petr Marek - 2016-03-09 03:35:22 PST

Comment 8 [reply] [-]

I've followed (frontend build) `https://developer.mozilla.org/en-US/docs/Mozilla/Developer_guide/` but I have troubles to build it. Complete output of `./mach build, .mozconfig` and `.hgrc` is here: `http://pastebin.com/eTjyJr8q`.

Can you please navigate where I should start to resolve this issue (mozilla wiki, known issues...)?

Flags: needinfo(margaret.leibovic@gmail.com)

These are the docs I normally encourage people to follow: `https://developer.mozilla.org/en-US/docs/Mozilla/Developer_guide/Build_Instructions/Simple_Firefox_for_Android_build`

It's not immediately obvious to me what your build problem is. You should join #mobile on `irc.mozilla.org` for realtime help debugging your build issue.

These are the docs I normally encourage people to follow: https://developer.mozilla.org/en-US/docs/Mozilla/Developer_guide/Build_Instructions/Simple_Firefox_for_Android_build

It's not immediately obvious to me what your build process is, so I can't help debugging your build issue.

Flags: needinfo?(margaret.leibovic@gmail.com)

Petr Marek - 2016-03-10 17:02:33 PST

My issue with build was because of the exFAT drive I cloned the repo on. Main indicator that something wasn't right was repo's size 56GiB. There was a problem with symlink creation and build silently crashed. Now on OS X Extended drive it looks OK (4.56GiB), run OK.

Petr Marek - 2016-03-13 09:45:15 PDT

Created attachment 8720984 [details] [diff] [review]

patch for Bug 111663

I added suggested tests whether is it a function for both properties (button.onClicked, button.onButtonClicked). Adding log message was also suggested, but I only found this way to log, not sure that this is suitable for deprecation warning (or other type?): "Services.console.logStringMessage(msg)". Is there a convention for log messages format?

Actually you mentioned it in the first comment of this bug so I supposed that should be a check for this method. As I looked at the code, it does not seem that this 'onButtonClicked' method is used. Please see the attachment. In the screenshot there is an output of the 'Find in path..' for this method. I think that the relevant code here is only my check for method existence and line 'onButtonClicked: ignoreEvent(context, "notifications.onButtonClicked")' which does not make much sense to me as I don't know the code base. Maybe the method is actually ignored or left in the code base for compatibility reasons as mentioned Federico Paolinelli?

Comment on attachment 8720984 patch for Bug 111663

Review of attachment 8720984

```

::: mobile/android/modules/Notification.jsm
@@ +240,5 @@
+         if(button.onClicked instanceof Function){
+             button.onClicked(id, notification_cookie);
+         }
+         if(button.onButtonClicked instanceof Function){
+             button.onButtonClicked(id, notification_cookie);
+         }

```

Looking at the code, it looks like I probably made a typo and meant to say 'onButtonClick'.

I understand that you're not familiar with the codebase, but it's been a long time since I've looked at this myself. Part of the job of fixing a bug is diving in to take a look around and justify the change you made.)

Looking at the documentation, I see that 'onClick' and 'onButtonClick' are actually two different supported notification handler methods: https://developer.mozilla.org/en-US/Add-ons/Firefox_for_Android/API/Notifications.jsm

And you can see how we use them in [DownloadNotifications.jsm#148](http://mxr.mozilla.org/mozilla-central/source/mobile/android/modules/DownloadNotifications.jsm#148)

Spending even more time thinking about this code and the documentation, I'm not even sure why we have this `button.onClicked` call at all here... seems like it should be removed.

Looking in our add-ons MXR, I don't even see any add-ons using `Notifications.jsm`, so we don't need to worry about add-on compatibility, but should think about how this is being used in our app itself.

In conclusion, you should just remove this button click code from the bottom of this case statement, and you should help update the documentation on MDN to make it clearer how this module is actually used.

I looked at the code and documentation closely and for pre 33 there are 'aOptions.onCancel' methods. If I understand correctly these could be defined precisely as proposed; that id should 'onClick(id, cookie)' and 'onCancel(id, cookie)' as it is used like that (at least 'onCancel' in case 'notification-closed').

So I proposed new patch considering this. But if I should rather remove the update documentation that 'onCancel' and 'onClick' from options are not use 'notification-closed' should be also modified ino.

The goal is to make a single diff file that shows the difference between the mozilla-repo tree you pulled, and the changes you want to make. As you can see from the files you attached, that's not the case for those files.

I'm not sure what your tree looks like, so it's hard to give exact steps for you to create this patch. Did you use hg commit to make commits? Or are you using mercurial queues? If the former, you can use the histedit extension to fold commits together. If the latter, you should look up the qfold command.

> Please, let me know how should I proceed with update of the documentation.

MDN is a wiki, so you can make an account and propose changes to this page: https://developer.mozilla.org/en-US/Add-ons/Firefox_for_Android/API/Notifications.jsm

I would replace references to "NotificationHandler" with something like "handler object" isn't actually a NotificationHandler type defined anywhere. I would also explain what is expected or supported in that object.

Additionally, I think we can get rid of references to things that were deprecated in Firefox a very long time ago, and that isn't at all supported anymore.

Learned tips

- Do **not** clone a repo to **exFAT** filesystem
 - 4.5GiB -> 56GiB
 - No symlinks
- Use **IRC** for real-time communication
- When contributing to mozilla projects
 - learn **hg** (mercurial) a bit
 - Patch creation
 - Patch fold
 - Patch diffs
