JEdit
Results

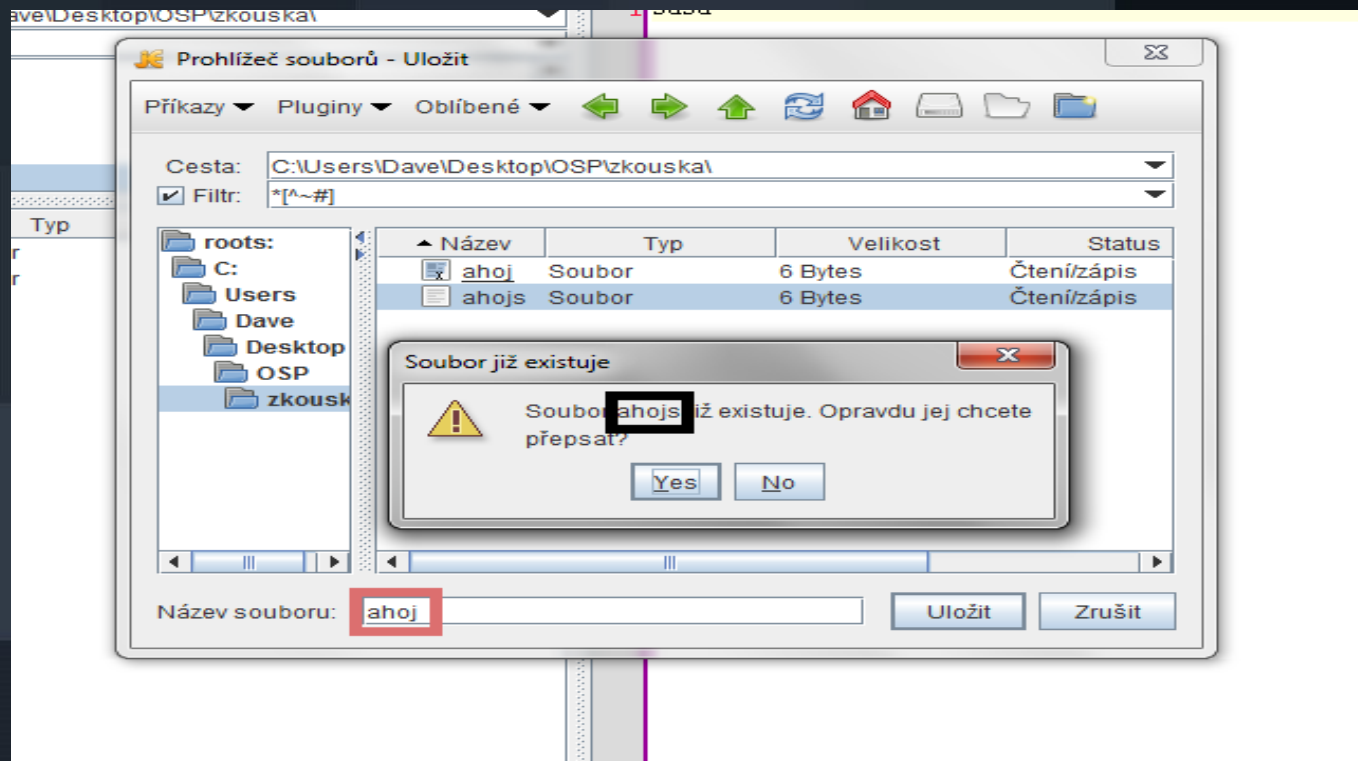

My task

- Try to repair a bug when user click on „Key words to Upper Case“ in Macro menu

My final task

- Bug during saving a file
- In some cases jEdit asked if you want to overwrite file with some name, but actual name file you want to save is different

Why change

- I have chosen this project because is written in Java
- I found out that problem with Keywords to Upper Case is problem with script in different language i don't know
- So i was looking for different bug / feature which i'm able to do

My work

- At first, a long time i had problem get jEdit to some editor and debug it. I have searched a lot of sources
- Then same time i spent with analyze where and how i can repair the bug
- The patch itself was easy to write

Results

- I repair the bug with saving
- Posted 14/4/2013, one more comment later (29/4/2013), but still no response

Details: Hi,

i fixes bug #3520572.

Original post : https://sourceforge.net/tracker/?func=detail&aid=3520572&group_id=588&atid=100588

If saving file, doesnt matter on selected files, but on textfield where is really the name of file, which i want to save.

So this is my solution. If i have SAVE dialog skip this IF, where method filesActivated(int mode, boolean canDoubleClickClose) is called.

Hi, will anybody look at this patch near time. I need some reaction, comment at least, please, becose this is part of my work to school. Thank you

Děkuji za pozornost
