Bugzilla

- Bug 60148 - Clean up warnings from the Clang compiler plugin

- Clang compiler plugin provides additional LO-specific warnings (number of warnings)

Bug description

- Composed from 3parts:
  - *unused variable warnings*
  - *incorrect block indentation (unformatted blocks)*
  - *log areas (macros such as SAL_INFO and SAL_WARN have a log area as their first argument, a warning is produced for areas that are not listed in sal/inc/sal/log-areas.dox)*

Profit from the bug

- Importance is on medium level!

- One of the main goals LibreOffice is to make code shorter!

Thanks for your attention!
