Assignment

[link to assignment](#)

- find all classes inherits from
 `std::map` or `std::vector`
- add it as private member variable

What did I?

- found class which inherits from `std::map` and `std::vector`
- tried to remove dependence

Detail - example

```
class Example : std::vector<int>
{
  /* code */
}
```

```
class Example
{
    std::vector<int> data;

public:
    int& operator[](int idx) {
        return data[idx];
    }
  /* code/
}
```

Problems

- project has many errors
- too large project to find all

Comunity

- many people have many opinions

Thanks

Any questions?
