

* Drupal - OpenSource Project

Michal Zíma

* Drupal - CMS with history

* Started in 2000

* Created by Dries Buytaert for sharing information with colleagues on campus

* Now in stable version 7 and developers working on version 8

* Ohloh, bugList, wishList, forum for developers, automatic checking new patches

*What is Drupal ?

- *Fast developing modular CMS
- *Main focus of the modules
- *Can be used for blogs, presentations, news servers, e-shops, corporate intranet
- *Powered by Drupal: prima.cz, [Business Wire](http://BusinessWire.com), [Kerneltrap](http://Kerneltrap.com), whitehouse.gov, london.gov.uk

* My issue in project

- * Fix bug in core Drupal
- * The core is managed by a group of members associated with Dries Buytaert, who still has the final word
- * Issue:
- * Possible unserialize() call for non-serialized value in menu_link_save()
- * Analyze source code, find the error and fix it
