Hi Simon,

in my master's (degree) study I have a course where I should somehow
contribute to some OSS. I would like for instance to resolve some bug,
add a small feature, etc.

Could you point me out to some bug (task) which you consider severe
but no one has time to resolve it?

Best regards
Martin

P.S.
I know the bug and task list is full of records and I could choose one
but Your recommendation (not only from the list) can be more
beneficial to do something useful.

Hi Martin,

any effort is very welcome! There are currently 93 bugs, 22 patches and some tasks open. Unfortunately,
this list grew so much in the last year-and-half (since my son was born and some other things kept me
distracted me from working on lwIP), that I currently don't have a good overview on what's unsolved versus
not reviewed. There are many bugs and patches which are simply not reviewed but won't take me much
time to get them committed.

Our IPv6 implementation could need some attention (DHCPv6, DNS), but aside from that, I guess the best
effort would be for you to go through the bug list and see what's worth it...

Oh, another big thing would be to get a decent solution for full zero-copy (there's at least one task for this),
but I don't really have an idea of how to solve this...

Thanks,
Simon

Hi,

thank You for response. I will check the bug and task list and try to

review some of them.

Best
Martin
